(a) The world model carries an item state forward under the plan
plan, t + 1
plan, t + 2
plan, t + h
History of one item in one store: sales, price, calendar
Encoder
$s_t$
$s_{t+1}$
$s_{t+2}$
$s_{t+h}$
$\hat{y}_{t+1}$
$\hat{y}_{t+2}$
$\hat{y}_{t+h}$
each step: state and that period's plan give the next state
Plan: price against the item's regular price, promotion, display, feature, events
Lift model: the same encoder and inputs with no roll-forward; every period is read from $s_t$ and that period's plan.
